

FlexClock

Vx-SERIES 510

Exceptional Value One Simple Solution

The FlexClock series offers comprehensive timekeeping devices that channel all of today's technologies through one simple hardware solution.

Slightly smaller than the Vx570 the Vx510 offers the same features at a lower price. The Vx510 supports both Ethernet and dialup, and works with PrintReader desktop use only, no mounting option available.

Punching Options

*Requires additional hardware

One Solution

Streamline your punching data from collection to report analysis. The Vx510 time clock synchs automatically with internet reports using Ethernet for real-time punch tracking.

With FlexClock's high-speed, on-board processor employee registration and clocking in/out can be completed in seconds.

TimeClock Data Collection

FlexClock uses SSL, Ethernet connectivity to act as a real-time collection device. Ideal for on-demand tracking and reporting features.

Gather employee time using magnetic stripe card, fingerprint reader, PIN code, and web based punching. Ideal for on-demand tracking and reporting features.

Connectivity

Whether your employees are remote or on site, FlexClock Vx510 gathers accurate records of their labor worked.

Get the clear picture of your workforce and the ability to manage labor costs.

Connectivity Options

Ethernet

FlexClock offers Ethernet connectivity, further enabling on-demand reporting. A employee scheduling option is in the final stages of development and will be released soon.

Standard Analog

In the event that Ethernet connectivity is lost temporarily on site, FlexClock will continue to send punches to the server through the regular Analog telephone connection.
